

FAA-PMA issued to Approach Fast Stack

Approach Fast Stack, a manufacturer of avionics interface products, announced today the issuance of FAA-PMA (Federal Aviation Administration - Parts Material Authorization) on the newly released Pro-X Hub.

According to General Manager Tim Hass, "We always strive for the highest quality in our products and the addition of the Pro-X Hub to Approach's other PMA'd products helps us achieve the results we and our customers expect. We have a stringent quality control process for the manufacture of our products and we are proud to have achieved this FAA-PMA qualification on our newly released Pro-X model."

Approach's modular wiring system interconnects avionics components with a central hub and ready-built cables for the majority of avionics in the marketplace, including Garmin's panel mount

avionics. All cables are double shielded and grounded at the hub, which eliminates the possibility of ground loops, and protects against any noise induction into the avionics system. The Pro-X Hub is an EFIS centric design allowing the flexibility of installing any EFIS system in the avionics suite.

Approach specializes in assisting customers in designing and developing an avionics suite that best meets the pilot's needs. In addition, Approach helps customers in the installation and operation of their avionics package, and provides complete interface documentation and support.

BATESFIELD GPU: Often Imitated but NEVER Duplicated!

BatesField GPU requests your consideration for when you are in the market for Ground Power Units. We have been manufacturing Ground Power Units (GPU's) since 1997. Please let us review just some of the reasons to choose us as your source:

We are the developer and sole manufacturer of all series of the BatesField Aviation Ground Power Units which require very minimal to maintain in peak operating condition.

We have provided aviation equipment in the past to aircraft manufactures and their stations such as HondaJet, Eclipse Aviation, Learjet, McCauley Propellers, Pilatus, and Kodiak's Quest Aircraft.

We have also provided GPU equipment to various governmental agencies and contractors such as the FBI, the U.S. Forest Service, Governors of State, New

York Aviation School, Harvard University Aviation School, Atmospheric Science Department of the University of Wyoming, National American University, Hampton Aviation School, New Mexico State University, University of Mississippi, SNC at the U.S. Air Force Hurlburt Field, Neany Inc, Air Force of Dubia,

and Ejercito De Nicaragua, Fuerza Aerea, Australian Government- Department of the Environment, Water, Heritage and the Arts, Australian Antarctic Division to name just a few.

Our corporate customers range from single owners with only one aircraft to large companies such as Coca-Cola/Coke

and Chevron/Texaco with fleets of aircraft on many continents including Antarctica. While celebrities such as John Travolta do own our equipment, we have had our competition deceitfully and fraudulently pretend to be a famous Hollywood actor wanting information on our equipment. Even the model names and series numbers that we coined years ago have been used by our competition in promoting their products. Our customers know the difference and have the confidence that they are receiving the best quality of equipment on the market from us at an affordable price.

Thank you for you interest in the equipment that we manufacture. You may contact any of our sales staff at 405-258-2600 should you have any questions.
